

Detail of the trimap network f_θ (hidden width D , n residual blocks)

Node features: 16 region descriptors (LAB and HSV statistics, position, area, isoperimetric ratio, gradient, boundary ratio) $\parallel$ 3 automatic prior channels.

Edge features: colour dissimilarity, centroid distance, shared boundary length, gradient contrast, edge type; in (b) solid edges are region adjacencies and dashed edges non-local colour links.

Trimap labels follow OpenCV: 0 definite background, 1 definite foreground, 2 probable background, 3 probable foreground.
